**VEDIC THOUGHTS ON THE ENVIRONMENT IN THE LIGHT OF MODERN
ECOLOGY**

Dr. Susmita Mistri

Abstract

Discussion about environment in the present world is an important issue for the conscious mind. The environment is combination of various objects such as human, trees, animals, soil, water, fire, air, sky, planets, stars etc. is the greatest resource on Earth is life. For the proper status and development of that life the natural health of the environment is particularly necessary. But with the progress of the present mechanical Civilization the environment is being polluted in various ways. Due to the indiscriminate cutting of forest and the spread of urban civilization, the balance of the environment is being destroyed, therefore human life in this world is currently in a special crisis, their four environmental sciences have been designated as a subject to make people aware of the environment. It is clear from the study of ancient Indian Vedic literature that environmental awareness and environmental thought easily and fluently expressed in the minds of ancient Indian Vedic sages from the dawn of ancient Indian Vedic culture Or review of Vedic literature and the major upon a short to understand how the environment has appeared shows that the concept of the basic elements of environmental composition that is organised in science was also a body in the Vedic era and the subsequent upon a short error in the form of mantras. Just as the Vedas discuss each natural element , namely earth ,water ,air and sky, in depth, the use of land ,use and storage of water, air pollution and the natural balance of the universe etc. are discussed and scientific analysis is mentioned. There is only and over all respect love and gratitude for nature and the environment, as a result protecting hermit as a whole was an inherent part of the life of the Vedic sages.

Keywords: Five Elements, Deep Ecology, Modern Ecology, Eco- Centric, Environmental Science, Air Purification.
